Let's Start!

The surgeon is a robot?

Learning Outcome

Describe complicated or unusual events in the past through a wider range of B1 language in both work and social contexts.

Can Do Statements

- I can talk about technology and subjects of study.
- I can talk about cause and effect.
- I can express possibility and certainty.

Ask your partner:

- What do you know about the use of robots in medicine?
- How would you feel if a robotic surgeon was being used in your surgery?

Let's Explore!

He **got a second opinion***

* When you "get a second opinion" you see or talk to another doctor about a diagnosis or procedure.

Instructions: Read the text aloud.

Dear Dr. Brook,

I was recently diagnosed with prostate cancer. Because I am about 65 pounds overweight, I was told that the surgery could not be performed unless I embarked on a weight loss program immediately. I sought a second opinion. Now, I have been offered an opening for the removal of my cancerous prostate if I opt for a robotic surgical system. Although the operation cannot be considered anything but essential, the idea of being cut open and operated on by a robot frightens me. How safely can the procedure be done with a robot at the helm? What are my chances of recovery if I go ahead with it?

Petrified with Prostate Cancer

...

Dear Petrified,

If I understand correctly, you are more worried about a robotic surgeon than by the surgery itself. Let me reassure you: the use of a robotic system in prostate surgery is a miraculous achievement in medical science. The prostate is located deep within the pelvis, so it can be reached only with difficulty in overweight patients. If they have the procedure, they may develop serious complications following it.

If you choose the robotic system it will increase the chance of a successful operation while decreasing the chance of complications. Your recovery rate could even be higher than a patient who is not overweight.

Good luck,

Doctor Brook

Let's Practice!

Ana is reviewing some vocabulary!

Instructions: Match the words from Column A to the definitions in Column B.

COLUMN A

1. Pelvis
2. Cancer
3. Surgery
4. Complications
5. Diagnose

COLUMN B

- a. a malignant and invasive growth or tumor.
- b. treatment, as an operation, performed by a surgeon.
- c. to determine the identity of a disease, illness, etc. by a medical examination.
- d. the large circular bones that support the lower part of your back.
Difficulties or problems.
- e. difficulties or problems

Let's Practice!

What's possible in a robotic surgical system?

Instructions: Read the sentences. Circle the correct option to complete the sentence.

1. The surgery _____ performed unless I embarked on a weight loss program immediately. must be/could not be/can
2. The operation _____ anything but essential. can considered/can not be considered/must consider
3. How safely _____ done with a robot at the helm? can be the procedure/can the procedure/can the procedure be
4. It _____ only with difficulty in overweight patients. can be reached/can reached/may reach
5. Your recovery rate _____ than for a patient who is not overweight. could even been higher/could even be high/could even be higher

Extension Activity

Find out about robots in medicine.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Go online or to a library and look up robots used in medicine.
- Make notes on what you find out. Try to find 2 or 3 examples.
- Write a short summary on each of the robots and read it to a partner in class.
- Listen to your partner's summaries.
- Discuss the uses of robots in medicine and what you think about it.

Self-Assessment

Yes

No

I find out about robots used in medicine.

☐ ☐

I write up summaries on my findings.

☐ ☐

I share my summaries with a partner.

☐ ☐

I give my thoughts on using robots in medicine.

☐ ☐

Target Words

- to seek** (verb): to go in search or quest of
e.g. I want to seek a second opinion
- helm** (noun): in charge or in the position of a leader
e.g. How safely can the procedure be done with a robot at the helm?
- to cut open** (verb): to dissect
e.g. The idea of being cut open and operated on by a robot frightens me.
- removal** (noun): the act of taking somebody/something away from a particular place
e.g. I have been offered an opening for the removal of my cancerous prostate.
- procedure** (noun): a set of steps for getting something done
e.g. If they have the procedure, they may develop serious complications following it.
- pelvis** (noun): the large circular bones that support the lower part of your back and are connected to the bones of your legs
e.g. The prostate is located deep within the pelvis.
- within** (adverb): in or into the interior or inner part; inside
e.g. Within the body is the skeleton.
- overweight** (adjective): too heavy
e.g. Your recovery rate could even be higher than for a patient who is not overweight.
- complication** (noun): a difficulty or problem
e.g. Unfortunately, there were several unexpected complications.

Learning Points

The First Conditional

You use the First Conditional to talk about real possibilities in the future.

You use the First Conditional to talk about something that has a real possibility of happening in the future.

If clause	Main Clause
<i>If you choose the robotic system</i>	<i>it will increase the chance of a successful operation</i>
<i>If they have the procedure,</i>	<i>they may develop serious complications following it.</i>

Examples:

- *I have been offered an opening for the removal of my cancerous prostate if I opt for a robotic surgical system.*
- *What are my chances of recovery if I go ahead with it?*
- *If I understand correctly, you are more worried about a robotic surgeon than by the surgery itself.*

Learning Points

Modal Verbs in the Passive Voice

You use modal verbs to add meaning to other verbs. They come before the dictionary form (infinitive without *to*) of the main verb.

Modal verbs add meaning to show certainty or obligation in a sentence.

You can use modal verbs in the passive voice.

You use the passive voice when you want to focus on the "receiver" of the action, rather than the "doer" of the action.

Here is the structure of a passive sentence:

Subject + To be + past participle

For example:

*How safely **is** the procedure **done** with a robot at the helm?*

You can add a modal verb before the To be.

Subject + modal + To be + past participle

For example:

*How safely **can** the procedure **be done** with a robot at the helm?*

Here the sentence now has an additional meaning of possibility, thanks to the modal **can**.

Examples:

- *The surgery **could not be performed** unless I embarked on a weight loss program immediately.*
- *The operation **cannot be considered** anything but essential.*
- *It **can be reached** only with difficulty in overweight patients.*
- *Your recovery rate **could even be higher** than for a patient who is not overweight.*
